>Download Latest Version of Python from python.org website & install it
>Download IDLE Integrated Development Learning Environment
                I use Pycharm you can download from PYcharm Website &
then install it
>After installing open PYCharm & go to new project & set name of project

>Write the code or copy from my source code & save it as main.py
            then go to PYCharm Terminal & Download & install some
recommended lib.
        $sudo python3 -m install pip || $ sudo apt-get install pip
        $pip install pyqrcode
        $pip install tk || $pip install tkinter
>After that you can run your code

Enter url or text   Orav.in   #link
Enter location or path   c:/users/saurav/desktop/   #path
Enter name of file   Orav   #name of file
Enter scale   8   #size of qr code

Note : This is just an example & enter path carefully if you can't path just go
to desktop & click right button
Of mouse & go to properties & copied path or Location after the path copied
& generated
Checkout

Thank You !
